Harmony™ Indications

Harmony is designed to be a free-standing unit and uses a standard wall cabinet. It transports easily from room to room or between facilities.

- Acne vulgaris
- Actinic chelitis
- Atrophic acne scars
- Angiomas and spider angiomas
- Atopic dermatitis
- Back acne
- Café-au-lait macules
- Darier's disease
- Dermatosis papulosa nigra
- Dynamic hyperextension
- Edema
- Erythema of roseacea
- Facial, truncal and leg telangiectasias
- Fine lines and wrinkles
- Hyperkeratosis
- Hyperpigmentation
- Hypopigmentation
- Increased blood flow, relaxation of muscle and relief of pain
- Kanuses
- Keratoses
- Lentigines (senile and solar)
- Lentigos
- Leukoderma, including vitiligo
- Melasma
- Nevus
- Nevus of Ota
- Nevus spilus
- Perioral wrinkles
- Periorbital wrinkles
- Pseudofolliculitis barbae
- Psoriasis treatment
- Port wine stains
- Reduction in red pigmentation in hypertrophic and keloid scars
- Reticular veins
- Roseacea
- Scars
- Seborrheic dermatitis
- Seborrheic keratoses
- Skin resurfacing
- Skin tags
- Solar lentigos
- Spider hemangiomas
- Spider nevi
- Spider veins
- Superficial skin lesions
- Surgical incision/excision, vaporization, ablation and coagulation of soft tissue
- Tattoo removal: black, blue, green
- Tattoo removal: light blue, yellow, red
- Telangiectasias
- Vascular lesions
- Venous lake
- Venous malformation
- Verrucae
- Warts

 Specifications for Harmony™

Harmony™ is designed to be a free-standing unit and uses a standard wall cabinet. It transports easily from room to room or between facilities.

***About Alma Lasers***

Alma Lasers, Ltd. is a global developer, manufacturer and provider of laser, light-based and radiofrequency devices for aesthetic and medical applications. Since 1980, the founders of Alma Lasers have been at the forefront of innovative multi-application/multi-application systems designed to meet the unique needs of today’s practitioners. Alma’s mission is to provide modular, cost-effective and high-performance systems that enable practitioners to confidently offer safe, effective and profitable aesthetic treatments to their patients.

*©2008 Alma Lasers, Ltd. All rights reserved. Alma Lasers Ltd. in USA: Harmony™ is a trademark of Alma Lasers, Ltd. The product specifications are subject to change without notice.***
Today's aesthetic patients have a wide variety of needs. Now you can successfully meet them all with Harmony®XL. The HarmonyXL is the world's most expandable platform for aesthetic laser and light treatments. Modular in design, it uses up to ten distinct technologies built into one compact unit, and the multi-application system can treat more than 60 different aesthetic conditions. Key parameters of every output can be precisely controlled for any therapeutic level. Best of all, you can always upgrade your HarmonyXL to include future technologies still in development.

Over 60 different applications
The HarmonyXL gives you ultimate flexibility to treat a wide variety of patient-requested procedures. The platform expands to include the technologies most relevant to your practice and needs, so it can grow with you as your practice grows.

Modular handpieces make the difference
All the HarmonyXL handpieces are designed for minimal or no discomfort to the patient, with no loss of effectiveness. Use them in combination for a wide variety of treatment options. One of the most popular options is the Laser360 protocol for easy skin rejuvenation. The relatively new procedure uses 3 handpieces from the Harmony® system to treat a wide range of age and photo-damage symptoms. Patients achieve outstanding results in just 60 days, with minimal or no downtime.

---

No device will do more than the HarmonyXL to help you successfully attract, treat and retain the broadest range of clients to grow your practice profitably.

- Ten distinct technologies, many with integrated contact cooling
- 60+ aesthetic/medical applications
- High output energy for greater efficacy
- Expandable and upgradeable
- Includes components for Laser360™ skin rejuvenation
- High patient and clinical staff satisfaction
- Easily transportable from room to room and between facilities

Over 60 aesthetic/medical applications
The HarmonyXL gives you ultimate flexibility to treat a wide variety of patient-requested procedures. The platform expands to include the technologies most relevant to your practice and needs, so it can grow with you as your practice grows.

Modular handpieces make the difference
All the HarmonyXL handpieces are designed for minimal or no discomfort to the patient, with no loss of effectiveness. Use them in combination for a wide variety of treatment options. One of the most popular options is the Laser360 protocol for easy skin rejuvenation. The relatively new procedure uses 3 handpieces from the Harmony® system to treat a wide range of age and photo-damage symptoms. Patients achieve outstanding results in just 60 days, with minimal or no downtime.
“The Harmony System has been the ‘hub’ of our laser services. The quality of the treatments is real and palpable. Our patients line up to get their spots removed with our AFT system and to have their face resurfaced with our Pixel. They get a super deep treatment with great results and minimal down time.”

John Hamel, MD
Founder and Owner of Complete Laser Clinic since 2003
HarmonyTM delivers the latest in technical performance with an unrivaled edge: modularity and upgradeability. Buy only the technologies you need now, and expand as you expand the scope of your aesthetic practice. Because the technology is in the handpieces (not the machine), an expansion or upgrade is simple and quick. Even more, the machine features a detachable design where the top and bottom split apart. This innovation makes it very easy to move HarmonyTM from room to room or to different locations.

The Alma Lasers difference

HarmonyTM accommodates Advanced Fluorescence Technology (AFT) and laser technology in the same system. Its high power allows for higher fluence treatments—but patient comfort is assured through the proprietary IN-Motion™ technology, unique to Alma Lasers. For additional patient comfort, you also have your choice of contact cooling, cooled or noncooled handpieces.

Exclusive to Alma Lasers, HarmonyTM boasts the Pixel® technology—a breakthrough for fractional ablative treatments. In addition, you can include one or all of the following technologies to expand your service options:

- Advanced Fluorescence for skin rejuvenation, hair removal, acne and treatment of vascular and pigmented lesions. NEW! Now available with integrated contact cooling
- Near Infrared for deep dermal heating and the treatment of lax skin
- Pixel® 2040 Er:YAG for fractional ablative skin resurfacing of mild age and photo-damaged skin. NEW! Now with more than double the maximum output energy
- Long-pulse 1064 Nd:YAG for leg veins and other vascular lesions
- Pulsed UVB for restoration of lost pigment and psoriasis
- Q-Switched Nd:YAG for dark colored tattoo removal and dermal pigmented lesions
- Frequency Doubled Nd:YAG for lighter colored tattoo treatment
- Er:YAG for minimally ablative resurfacing procedures—including wrinkles and scar revision
- Long-pulse 1320 Nd:YAG for the non-ablative treatment of facial wrinkles to improve the appearance of photo-aged skin
- NEW! LED handpiece for topical heating leading to increased blood flow, temporary relaxation of muscles and relief of pain.

AFT spectral conversion

AFT takes formerly unused short-wavelength light and converts it into part of the usable spectrum.

Laser360 is a popular and very easy way to help improve a patient’s skin color, texture, tone and laxity. It uses 3 technologies, takes 60 days and offers complete skin rejuvenation.

Laser360 meets the key needs of an aging patient’s skin, and it can be customized to meet each patient’s specific needs. Use it to treat areas such as the face, neck, chest, and hands, or anywhere the skin has been touched by age or photo-damage.

How Laser360 treats the most common age-related skin complaints

Color with Advanced Fluorescence Technology (AFT)

Treat superficial vascular and pigmented irregularities to improve a patient’s skin color. You’ll use a series of approximately five treatments using one of the AFT handpieces on HarmonyTM:

- SR/SSR (skin rejuvenation)
- VL/SLV (superficial vascular/pigmented)
- VP/SVP (vascular/pigmented lesions)

Technologies In Depth: AFT

AFT is the next generation of intense pulsed light. It takes formerly unused short-wavelength light and converts it into part of the usable spectrum through a special filtering system. It increases emission and penetration, for safer and more effective treatments.

AFT also delivers Equally Distributed Fluence, which means that every pulse has uniform energy density across the entire output face. This fluence ensures repeatable results and remarkable safety.

AFT yields a more efficient system for ideal clinical improvements, less discomfort and minimal skin damage.
Harmony™ delivers the latest in technical performance with an unrivaled edge: modularity and upgradeability. Buy only the technologies you need now, and expand as you expand the scope of your aesthetic practice. Because the technology is in the handpieces (not the machine), an expansion or upgrade is simple and quick. Even more, the machine features a detachable design where the top and bottom split apart. This innovation makes it very easy to move Harmony™ from room to room or to different locations.

**Texture and tone**

Give your patients a more youthful appearance with the Pixel 2940 fractional skin resurfacing laser on Harmony®. A series of two to four virtually pain-free treatments will gradually stimulate new cells to replace aged and photo-damaged skin, with no patient downtime.

**Technologies In Depth: Pixel**

With Pixel 2940, preprogrammed laser energy passes through the patented Pixel micro optics lens array and penetrates the skin, affecting just 15–20 percent of the surface. It creates an ablative thermal channel at the pixel area—a micro-injury—without disturbing the surrounding tissue. Those micro-injured areas start the process of healing and the untreated area acts as a reservoir for rapid restoration. As collagen remodels, skin tightens and texture improves.

The gentleness of the procedure allows delicate areas such as the neck, chest and hands to be treated as safely as the face with little risk of infection. There is little downtime or discomfort, and no analgesia, gels or other disposables are required.

Hair Removal & More

**In-Demand Applications**

**Hair removal**

Hair removal is the most popular light-based aesthetic procedure in the world, and intense pulsed light is by far the most popular method of performing photoepilation. Using a 650 – 950 nm AFT handpiece, Harmony™ can deliver fast, effective results for permanent hair reduction on all skin types, including tanned skin. And the latest SHR handpiece now has contact cooling and uses IN-Motion™ technology for virtually pain-free procedures with no downtime—Alma Lasers’ remarkable Pain Free, Hair Free™ procedure.

How it works

In AFT hair removal, a large rectangular pulse of broad-spectrum light is applied to the surface of the skin. The energy travels harmlessly through the epidermis and dermis until it strikes the hair follicle, which contains a dense, melanin-rich hair shaft and bulb.

The dark-colored melanin absorbs the light and briefly spikes in temperature, destroying the hair-producing cells surrounding the follicle. Because the heat is not sustained, however, no damage occurs outside the follicle area.

**Acne**

Acne treatments with AFT are:

- Non-invasive
- No topical or systemic drugs
- Completely painless, no adverse effects or downtime
- Easy to administer with an ergonomic handpiece design

**IN-Motion™ Technology removes pain**

IN-Motion Technology represents a breakthrough in patient comfort, speed of procedures and repeatable clinical results. Why? Because the high peak energies used in traditional photoepilation technology must have high cooling before, during and after each pulse and therefore the handpiece must be stationary during the energy delivery. Alma Lasers’ unique IN-Motion technology combines concurrent cooling with a gradual thermal rise to the target’s therapeutic temperature, without the risk of injury and with much less pain for the patient.

Hair Removal

In-Demand Applications

Hair removal

Hair removal is the most popular light-based aesthetic procedure in the world, and intense pulsed light is by far the most popular method of performing photoepilation. Using a 650 – 950 nm AFT handpiece, HarmonyXL can deliver fast, effective results for permanent hair reduction on all skin types, including tanned skin. And the latest SHR handpiece now has contact cooling and uses IN-Motion™ technology for virtually pain-free procedures with no downtime—Alma Lasers’ remarkable Pain Free, Hair Free™ procedure.

How it works

In AFT hair removal, a large rectangular pulse of broad-spectrum light is applied to the surface of the skin. The energy travels harmlessly through the epidermis and dermis until it strikes the hair follicle, which contains a dense, melanin-rich hair shaft and bulb.

The dark-colored melanin absorbs the light and briefly spikes in temperature, destroying the hair-producing cells surrounding the follicle. Because the heat is not sustained, however, no damage occurs outside the follicle area.

Acne

Clear inflammatory acne lesions without drugs or undesirable side effects, with the AFT Acne Handpiece. Intense blue wavelengths in the range of 420 – 950 nm target the porphyrins produced as part of the normal metabolism of p. acnes bacteria. The interaction of the intense blue light and the porphyrins creates singlet oxygen that rapidly destroys the bacteria without damaging the surrounding tissue.

Acne treatments with AFT are:

- Non-invasive
- No topical or systemic drugs
- Completely painless, no adverse effects or downtime
- Easy to administer with an ergonomic handpiece design

Medical Applications

Vascular and pigmented lesions
Four handpieces on Harmony® can treat a wide range of vascular and pigmented lesions, as well as other skin abnormalities. These types of applications are typically treated in a dermatologic or other traditional medical setting.

The AFT VP and the new, cooled SVP handpieces (540 – 950 nm) take advantage of strong absorption of both melanin and oxyhemoglobin in the 540 – 600 nm range. They successfully treat many vascular and pigmented lesions such as:
- Port wine stains, hemangiomas, telangiectasias, symptoms of rosacea, angiomias and Poikilodermia of Civatte
- Lentigos, melasma, seborrheic keratoses, café-au-lait, dyschromia, ephelides and dyspigmentation

For superficial lesions, shifting much of the energy to shorter wavelengths that still have strong melanin/oxyhemoglobin absorption—yet penetrate less deeply—the VL and new, cooled SVL handpieces offer superior performance.

For stubborn lesions, the SVL handpiece complements the VP and SVP to offer additional range.

Melanin/Oxyhemoglobin absorption curves

Leg veins
Treat leg veins with long-pulsed 1064-nm light. The Nd:YAG 1064 laser handpiece coagulates and destroys large, deep, yet cosmetically unacceptable blood vessels and leg veins without the use of chemicals or needles. This easy-to-use, ergonomic handpiece effectively coagulates oxygenated reddish telangiectasias, as well as deoxygenated bluish venule ectasia and reticular veins up to 4 mm diameter.

Dermatoses
The UVB handpiece uses high-power, spectral irradiance in the UVB and UVA wavebands to target and treat dermatoses such as psoriasis, leukoderma, vitiligo, stretch marks (striae distenase), atopic dermatitis (eczema), seborrheic dermatitis and hypopigmented scars.

The treatment is much faster than either PUVA or UVB phototherapy. It involves no drugs and treats only specific areas to avoid exposure to healthy tissue.

NEW! Promote healing
The new LED handpiece incorporates an array of diodes that emit yellow light at approximately 590 nm for general body healing. The clinical indications of the LED 590-nm handpiece include:
- Topical healing to promote increased blood flow
- Temporary relaxation of muscles
- Relief of pain

Non-Laser Handpieces

Medical Applications

Vascular and pigmented lesions
Four handpieces on Harmony® can treat a wide range of vascular and pigmented lesions, as well as other skin abnormalities. These types of applications are typically treated in a dermatologic or other traditional medical setting.

The AFT VP and the new, cooled SVP handpieces (540 – 950 nm) take advantage of strong absorption of both melanin and oxyhemoglobin in the 540 – 600 nm range. They successfully treat many vascular and pigmented lesions such as:

- Port wine stains, hemangiomas, telangiectasias, symptoms of rosacea, angiomas and Poikilodermia of Civatte
- Lentigines, melasma, seborrhoeic keratoses, café-au-lait, dyschromia, ephelides and dyspigmentation

For superficial lesions, shifting much of the energy to shorter wavelengths that still have strong melanin/oxyhemoglobin absorption—yet penetrate less deeply—the VL and new, cooled SVL handpieces offer superior performance.

For stubborn lesions, the SVL handpiece complements the VP and SVP to offer additional range.

Melanin/Oxyhemoglobin absorption curves

Leg veins
Treat leg veins with long-pulsed 1064-nm light. The Nd:YAG 1064 laser handpiece coagulates and destroys large, deep, yet cosmetically unacceptable blood vessels and leg veins without the use of chemicals or needles. This easy-to-use, ergonomic handpiece effectively coagulates oxygenated reddish telangiectasias, as well as deoxygenated bluish venule ectasia and reticular veins up to 4 mm diameter.

Dermatoses
The UVB handpiece uses high-power, spectral irradiance in the UVB and UVA wavebands to target and treat dermatoses such as psoriasis, leukoderma, vitiligo, stretch marks (striae distensae), atopic dermatitis (eczema), seborrhoeic dermatitis and hypopigmented scars.

The treatment is much faster than either PUVA or UVB phototherapy. It involves no drugs and treats only specific areas to avoid exposure to healthy tissue.

NEW! Promote healing
The new LED handpiece incorporates an array of diodes that emit yellow light at approximately 590 nm for general body healing. The clinical indications of the LED 590-nm handpiece include:

- Topical heating to promote increased blood flow
- Temporary relaxation of muscles
- Relief of pain

Non-Laser Handpieces

Other Applications

Tattoos
The Q-Switched Nd:YAG handpiece on Harmony™ uses two discrete wavelengths to treat a broad range of tattoo colors, including:
- Dark colors like black, blue and green with 1064-nm wavelength
- Brighter colors like red, orange and yellow with 532-nm wavelength

How it works
Tattoo ink and natural pigmentation like melanin absorb short pulse duration/high peak energy Q-switched pulses so quickly that they create a photo-acoustic effect within the pigment clusters. This effect breaks down the ink into much smaller particles that can be more easily removed by the body’s natural filtering system.

Textural improvements
Skin resurfacing, or laser peeling, is a popular procedure for the controlled treatment of many skin abnormalities attributed to age or photo-damaged skin. This textural improvement can be handled very precisely with the Er:YAG handpiece on the Harmony™.

The specific tissue ablation and small zone of residual thermal damage result in faster epithelialization following treatment of rhytids, epidermal nevi, skin tags, verrucae, keratoses, acne scars, leukoplasia and rhinophyma.

For a gentler treatment of acne scars, fine lines and wrinkles, the 1320-nm Long-Pulse Nd:YAG laser handpiece achieves deep penetration and selectively targets water in tissue to induce neocollagenesis and to fill in fine structures.

Tattoo removal typically requires six to eight or more treatments, spaced approximately six to eight weeks apart. Using the Q-Switched Nd:YAG handpiece on Harmony™ means those treatments are:
- Easy to administer—simple to switch between wavelengths
- Customizable with a wide assortment of spot sizes, along with Quick Snap disposable tips that protect against cross contamination
- Also able to treat dermal pigmented lesions such as nevus of Ota

A Prime Opportunity: Aesthetic Medicine

There are countless social reasons for a current surge in the popularity of cosmetic procedures: an aging population, a strong economy and a celebrity culture that values youthful attractiveness, to name a few.

A number of scientific, medical breakthroughs, however, have also contributed to the incredible rise of aesthetic medicine’s popularity. These novel technologies—especially multifunctional, upgradeable systems such as HarmonyXL—have positioned this market for growth.

Aesthetic Market Growth 2006 – 2010

Aesthetic procedures will continue to increase in popularity. Source: Millennium Research Group, 2006

A Significant Return

HarmonyXL, and especially the Laser360 procedure, represent the best opportunity for a growing aesthetic practice to take advantage of the trends in today’s cosmetic marketplace. An investment in the HarmonyXL provides a significant return. It:

- Incorporates today’s most popular applications in a single system
- Reduces costs to add additional applications (even compared to the used market)
- Requires no consumables, which increases your profit margin

Just two to six patients a month can cover the cost of your HarmonyXL investment.
 Harmony™ Indications

- Acne vulgaris
- Actinic chelitis
- Atrophic acne scars
- Angiomas and spider angiomas
- Artificial skin lesions
- Surgical incision/excision, vaporization, ablation and coagulation of soft tissue
- Tattoo removal: black, blue, green
- Tattoo removal: light blue, yellow, red
- Telangiectasias
- Vascular lesions

Specifications for Harmony™

Harmony™ is designed to be a freestanding unit and uses a standard wall outlet. It transports easily, from room to room or between facilities.
